

## Jigsaw puzzle game - Characteristics & application

The jigsaw card game consists of 12 cards:

- 4 cards which describes different characteristics of materials at the nano scale
- 4 cards which describes applications(products) based on the characteristics
- 4 cards that presents pictures of the products

## Rules of the Jigsaw puzzle

Objective of the game: to match between characteristic- application- picture.

1. Each member will choose randomly 4 cards.
2. Each member in his/her turn will present one card and the other two members will match in order to have the right series (characteristic - application - picture)
